

Science Spring Term 2

In Reception are continuing to learn about the world around us through lots of fun activities and visits. We visited the farm to find out all about what the living things need, to grow healthy and strong. We saw where the animals live and the types of food they eat.

In Year 1 we have been exploring everyday materials. We have named a variety of materials and explored them using all our senses. We have been comparing and describing their properties so that we could group and classify them.

In Year 2 we have been introduced to the concept of electricity and the role it plays in everyday life. We have been learning that mains electricity can be dangerous. We have been exploring and testing simple circuits using a range of components. We can label the circuits and explain what we have found out.

In Year 3 as part of our work with food in food technology (see D and T), we have been revising healthy and varied, balanced diets and been learning how to cook and apply the principles of nutrition and healthy eating.

In Year 4 See D and T

In Year 5 as part of our work with food in food technology (see D and T), we have been revising healthy and varied, balanced diets and been learning how to cook and apply the principles of nutrition and healthy eating.

In Year 6 See D and T
